

MICHAEL TH. KRIS, MD, FRSM

Physician linking medical sciences with business.

Trained traumatologist with perennial clinical and industrial practices. For more than twenty-five years carrying out of strategic consulting, and hands-on leading & management of projects in the life science business.

Interim/project management in Clinical R&D. Business development / re-organization / consulting / expert opinions in health care.

Linking medical sciences (R&D) with return-of-investment orientated business.

Focus: Client's satisfaction and quick return on investment

(Clinical) Project Management and/or (Clinical) Interim Management since 1985:

Job titles differed according to client's specific and individual wording or job descriptions. In fact, targets and responsibilities were more or less identical and covered to successfully completing a given task within a given budget and a given time line. Depending on the project's status prior to starting the assignment, preparing a project plan with milestones and budget bench marks was part of the job.

The list below certainly does not represent my complete professional experience as I attempted to limit my elaboration to (clinical) project management.

Year	Job	Description	Add-ons
